 VALIDATION RULES

- ✓ File format must be .CSV
- ✓ UTF-8 Encoding only
- ✓ Contains 'message\_body' column
- ✓ Contains 'sender\_id' column
- ✓ Maximum 100,000 rows

Files failing these checks will trigger a 422 unprocessable Entity error.

## Need help with data?

Download our structured CSV template to ensure your SMS data is compatible with the latest drift detection model.

## Analysis Results

Batch ID: #SeIELD-20240520-X7 (Processed 12,402 messages)

</> ENDPOINT: POST /score ● 200 OK Lat: 242ms

ML Computed

Drift Score

78.2 / 100

Significant deviation detected from baseline model.

ML Computed

Anomaly Percentage

12.4 %

Messages flagged as outliers compared to training set.

ML Computed

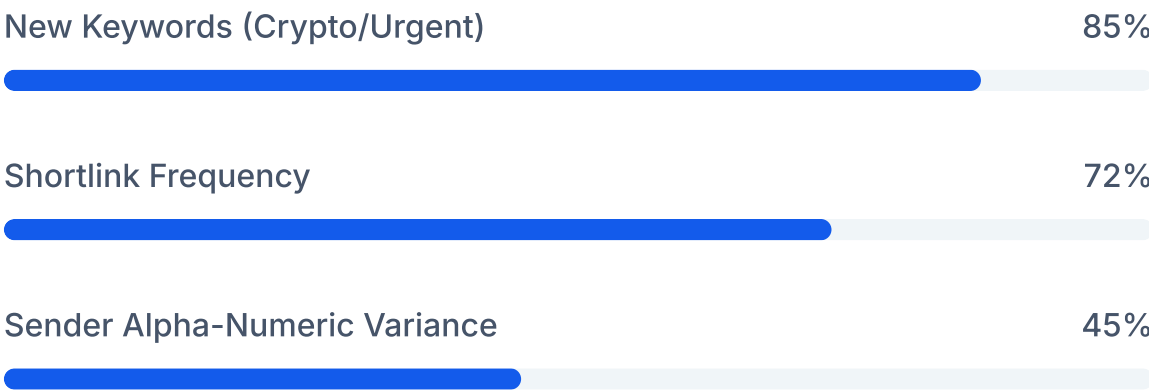

Risk Level

e lGe

Immediate attention required for active campaigns.

### Model Insights

#### TOP DRIFT CONTRIBUTORS

#### Model Recommendation

Current drift exceeds threshold (75). We recommend retraining the baseline model with the current anomalous batch to improve precision.
